

Embedded Artificial Intelligence

Devices, Embedded Systems, and Industrial Applications

Editors:

Ovidiu Vermesan, SINTEF, Norway

Mario Diaz Nava, STMicroelectronics, France

Björn Debaillie, imec, Belgium

Recent technological developments in sensors, edge computing, connectivity, and artificial intelligence (AI) technologies have accelerated the integration of data analysis based on embedded AI capabilities into resource-constrained, energy-efficient hardware devices for processing information at the network edge.

Embedded AI combines embedded machine learning (ML) and deep learning (DL or spiking neural network (SNN) algorithms on edge devices and implements edge computing capabilities that enable data processing and analysis without optimised connectivity and integration, allowing users to access data from various sources.

Embedded AI efficiently implements edge computing and AI processes on resource-constrained devices to mitigate downtime and service latency, and it successfully merges AI processes as a pivotal component in edge computing and embedded system devices. Embedded AI also enables users to reduce costs, communication, and processing time by assembling data and by supporting user requirements without the need for continuous interaction with physical locations.

This book provides an overview of the latest research results and activities in industrial embedded AI technologies and applications, based on close cooperation between three large-scale ECSEL JU projects, AI4DI, ANDANTE, and TEMPO. The book's content targets researchers, designers, developers, academics, post-graduate students and practitioners seeking recent research on embedded AI. It combines the latest developments in embedded AI, addressing methodologies, tools, and techniques to offer insight into technological trends and their use across different industries.

River Publishers Series in Communications and Networking

ISBN: 9788770228213

e-ISBN: 9788770228206

Available From: May 2023

Price: € 104.50 \$ 130.00

KEYWORDS:

Embedded artificial intelligence, edge artificial intelligence, intelligent embedded systems, edge industrial computing, neuromorphic computing, AI hardware platforms, neuromorphic architecture, neural networks, spiking neural networks, benchmarking, deep learning, machine learning, industrial internet of things, image processing, semiconductor manufacturing, trustworthy microelectronics, AI-enabled software applications.
