

Internet of Things (IoT) and Wastewater Reuse

Authors:

Ana Cristina Faria Ribeiro, University of Coimbra, Portugal

A. K. Haghi, Chemistry Center, University of Coimbra, Portugal

This work aims to present the practical application of an IoT model that can be used as the solution to the problems of water facilities. It presents IoT as one of the efficient tools for the control of a set of water and wastewater networks. Another novelty of this work is to investigate the utilization of remote sensing (RS) facilities equipped with networked sensors, advanced modems, data loggers, and the IoT in a case study. This volume is ideal for water industry personnel, academic staff, and master/research students in environmental engineering science.

TABLE OF CONTENTS

1. Introduction
2. Methods
3. Results and Discussions
4. Conclusion

River Rapids

Internet of Things (IoT) and Wastewater Reuse

Ana Cristina Faria Ribeiro

A. K. Haghi

River Publishers

River Publishers Series in River Rapids

ISBN: 9788770042017

e-ISBN: 9788770042000

Available From: August 2024

Price: \$ 65.00

KEYWORDS:

Internet of Things (IoT), water loss, wastewater reuse, remote sensing (RS), geographic information system (GIS), polyhydroxyalkanoates (PHAs), networked sensors, advanced modems, data loggers, wastewater treatment, aerobic biochemical oxygen demand (BOD), closed loop control system (CLCS), oxidation reduction potential (ORP)
