

Peri-urban Conflicts and Environmental Challenges: A Mediterranean Perspective

Editors:

Antonio Tomao, University of Tuscia, Italy

Matteo Clemente, University of Rome, Italy

Urban expansion and the preservation of fringe landscapes are clearly interconnected issues. This book discusses the relationship between landscape and peri-urban agriculture and the possible implications of sustainable land management for fringe land quality, proposing a framework to evaluate the latent nexus between agro-forest systems and human settlements in Southern Europe. Eco-sustainable planning integrated with multi-faceted policy actions (social, economic, cultural and political dimensions) is a relevant approach to reinforce sustainability of fringe landscapes. Permanent assessment of these factors allows for the implementation of different development scenarios. The present work definitely contributes to systemic and multi-scale approaches informing environmental policies, with the aim of achieving an integrated management of peri-urban agricultural landscapes.
